

Premier Digest

for assimilation of
Fats, Carbohydrates,
Protein and Dairy

Premier Digest offers a full spectrum of potent, vegetarian digestive enzymes that can help optimize gastrointestinal function. Digestive enzymes are special proteins produced by your body that help break down complex food components into nutrients that your body can absorb and use for fueling energy processes of the body. Supplemental digestive enzymes promote healthy, efficient digestion and may help address a variety of digestive issues.*

Research indicates that supplementing with digestive enzymes may support symptom relief and assist in restoring natural levels of essential enzymes. Premier Digest is formulated to include key enzymes that can optimize digestion and improve nutrient uptake.*

These include enzymes that break down proteins, fats, starch and gluten, carbohydrates, dairy, and fiber. Premier Digest also includes the synergistic benefits of Plant-Gest™ Support, which contains antioxidant-promoting noni fruit, Postbiotic-rich apple cider vinegar, and protein-metabolizing pepsin.

Premier Digest's plant-based pepsin sets us apart from other animal-derived digestive enzyme products. Additionally, our proprietary fermentation process allows us to offer you a highly purified form of each key enzyme, free of residual solvents, antibiotics, or mold, which we verify through rigorous quality and purity testing.

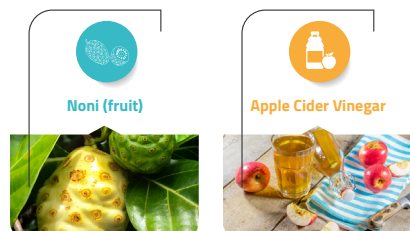

Benefits

- May help address digestive issues by stimulating the breakdown of food into individual nutrients the body can use.*
- Offers full spectrum support for the digestion of fats, starch and gluten, carbohydrates, fiber, and dairy.*
- Provides vegetarian-sourced pepsin, which facilitates the breakdown of protein to amino acids.*

Highlights

- Naturally derived and vegan-friendly
- Fermented for optimal purity and bioavailability.
- Manufactured without the use of additives such as magnesium stearate and rigorously tested for mold and solvents.

Plant-Gest Support

Recommended Use

- Take one capsule 3 times daily after meals or use as directed by your provider.
